-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

This Action is responsive to the communication filed July 28, 2006.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 10-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 10, the parenthetical expression is indefinite.

Claim 11 recites the limitation "the cooler" in lines 2-3. There is insufficient antecedent basis for this limitation in the claim.

Claim 12 recites the limitations "the flap" and "the pivot shaft". There is insufficient antecedent basis for this limitation in the claim.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 5-9 and 11-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Kehrre, of record.

It is believed that the pertinence of the reference is readily apparent.

Claims 1-2 and 11-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Klipfel '184.

It is believed that the pertinence of the reference is readily apparent. Note Figure 6 and flap valve 22.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Klipfel et al in view of Usami et al.

Klipfel et al show the claimed device except for the details of the flap valve. Usami et al show a similar system where the flap member 8 is welded to the shaft by way of arm 82. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have used such a welded construction for the valve of Klipfel et al in view of the readily apparent equivalence of the two constructions.

Claim 10 is rejected under 35 U.S.C. 102(e) as being anticipated by Nohl et al.

It is believed that the pertinence of the reference is readily apparent. Valve 46 controls flow through the heat exchanger and bypass even though it does not shut off flow to the heat exchanger completely.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
